

Tensile Force Sensors

Models 85081, 85082, 85083

Code:	85081 EN
Delivery:	approx. 12 weeks
Warranty:	24 months

CAD data 2D/3D for this sensor:
Download directly at www.traceparts.com
Info: refer to data sheet 80-CAD-EN

Model 85081

Model 85082

Model 85083

- Measuring ranges between 0 ... 10 kN and 0 ... 1000 kN
- Non-linearity < 0.2% F.S.
- For static and dynamic measurements
- Made of stainless steel
- Welded construction
- Optionally IP68
- Special versions, e.g. for tensile and compressive force, by request

85081 EN

Application

These load cells have an external or internal thread on both sides and can therefore be used for accurately measuring tensile forces in rods or, using thread eyes, in cables. The robust construction – welded of stainless steel – allows the sensor to be used in many fields such as research, development, test engineering and quality control.

Applications:

- ▶ Vehicle and container scales
- ▶ Test machines
- ▶ Measurements of proportioning and filling level
- ▶ Measurement of cable forces and cranes
- ▶ Avalanche research
- ▶ Oil production

Description

Both load cell types have cylindrical bodies, with a thread at each end for the application of the force. The good figures for linearity, hysteresis and long-term stability are achieved as a result of the special design of the measuring element, on which there is a full-bridge wire strain gauge. The sensors are constructed of stainless steel and are welded to hermetically seal them. The electrical connection has an important effect on the degree of protection of the sensors. Splash-proof protection is achieved here through a high-quality military standard plug-in connector. They are totally sealed by an integrated, waterproof cable connection (optional).

On the model 85081 there is a threaded bolt with an external thread on each side of the cylindrical body. These threaded bolts are integral components of the sensor. On the model 85082, both sides of the cylindrical body have an internal thread. The model 85083 has one internal and external thread.

Technical Data**Model 85081**

Order Code		Measurement Range	Thread T	\varnothing D	L	Dimensions [mm]		A	B
85081-10		0 ... 10 kN	M 14 x 2.0	38.1	66.0	24	19.1	39.9	
85081-20		0 ... 20 kN	M 14 x 2.0	38.1	66.0	24	19.1	39.9

Electrical valuesBridge resistance: foil strain gauges 350 Ω , nominal*Calibration resistor: 59 k Ω \pm 0.1 %

The bridge output voltage caused by a shunt of this value is given in the calibration protocol.

Reference excitation voltage: 10 V DC or AC

Characteristic: 2 mV/V, nominal*

Isolation resistance: > 5 M Ω

* Deviation from the stated value are possible.

Environmental conditions

Operation temperature range: - 55 °C ... 120 °C

Nominal temperature range: 15 °C ... 70 °C

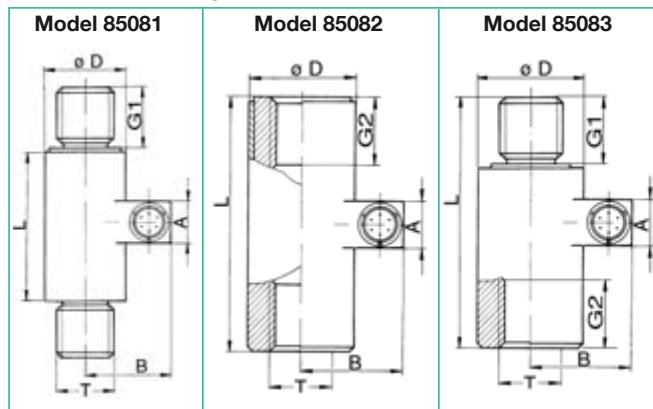

Influence of temperature to:
zero signal
characteristic \pm 0.01 % F.S./K
+ 0.01 % Rdg./K**Mechanical values**Non-linearity: < \pm 0.2 % F.S.Hysteresis: < \pm 0.2 % F.S.Spread at unchanged mounting position: < \pm 0.05 % F.S.

Max. operation force: 150 % of nominal force

Nominal deflection at nominal force:
measurement range \leq 0 ... 20 kN approx. 80 μ m
measurement range \geq 0 ... 50 kN approx. 100 μ mMaximum dynamic load:
recommended 70 % of nominal load
possible 100 % of nominal loadDesign:
The tensile load cells are welded hermetically close. KAPTON is used as an isolation material.

Material: stainless steel 17 - 4 PH (similar to 1.4542)

Dimensions: refer to table and dimensional drawing

Protection class: according to EN 60529 IP64
(IP68 refer to options)Electrical connection:
measurement range \leq 200 kN MIL plug-in connector
measurement range \geq 500 kN 6 pin bajonet connector
6 pin screw connectorWiring of the connector (plug):
pin A + B excitation positive
pin C + D excitation negative
pin E output negative
pin F output positive**Dimensional drawing**

The CAD drawing (3D/2D) for this sensor can be imported online directly into your CAD system.
